Create a secure campus using our student-centered safety framework—moving from the school's perimeter into the center of the campus.

Screen vehicles 24/7 using license plate cameras or RFID/toll tag readers

Send proactive alerts when unwanted vehicles are detected, i.e. non-custodial parents, fired staff, expelled students

Open gates based on access rules that you control

Secure and automate afternoon carline when parents and authorized drivers arrive on campus

SchoolPass works with you to deploy license plate cameras or RFID/toll tag readers, so you know who is driving on and off your campus and to automatically trigger proactive alerts, open gates and send instructions into the classroom for dismissal.

Implementing Cameras/Readers On Your Campus

SchoolPass provides a dedicated customer success lead who manages your set up, training and go live steps to ensure successful onboarding for administrators, teachers and parents. Most implementations take 4–8 weeks depending on solutions selected and school readiness.

- SchoolPass (or your camera vendor of choice) can install and configure the cameras/readers at designated entrances and exits

   — The school will need to provide power and data connectivity at camera locations
   — Cameras are fully managed and owned by SchoolPass

SchoolPass uses specialized infrared high-speed, low-light, all-weather license plate cameras to reliably detect license plates, 24/7.

"Security is an increasing priority for all schools. We partnered with SchoolPass to build an extra-layer of student safety, while automating our afternoon carline. We integrated license plate cameras and RFID/Toll tag readers to automatically match vehicles and drivers to school data and processes — bringing unmatched levels of security and arrival/dismissal efficiency for our school community."

Marynell Murphy, Director of Operations
The Lamplighter School
